DESCRIPTION

The SMD components are very small and the tweezers help us to do the job properly. And what should we do when we are having larger components, such as integrated circuits that can be so large that we can not grab them with tweezers? SMD vacuum tweezer will help us here. It uses a vacuum to grab the surface of IC. The vacuum is activated by pressing a small button, so using this tool won't be a problem. It comes with several tips for different integrated circuits.
